PROFESSIONAL SUMMARY

Java Developer progressing toward a technical architect / consultant role. Focused not only on fixing bugs but on designing new features and processes, anticipating the long-term consequences of technical decisions, and identifying bottlenecks and optimization opportunities. Specializes in breaking complex, tangled code into modules with a clear separation of generic logic from client-specific integrations. Treats documentation and stakeholder-readable communication as part of the engineering work, not an add-on.

TECHNICAL SKILLS

- **Languages / frameworks** - Java (primary), Spring / Spring Boot, Hibernate, jOOQ, Gradle / Maven, Python, React, TypeScript, SQL / PostgreSQL
- **Architecture** - DDD, hexagonal architecture, SOLID, modularization, microservices
- **Testing** - JUnit, Groovy / Spock, Cucumber, TDD, test pyramid
- **DevOps / Infra** - Docker, Argo, Elastic, Git, GitHub Actions, CI/CD, Linux

ARCHITECTURE & CONSULTING COMPETENCIES

- Analyzing trade-offs and the long-term consequences of technical decisions.
- Designing processes and features from scratch, not just implementing a specification.
- Identifying bottlenecks and proactively proposing improvements with real business value.
- Practicing and applying DDD in current projects (course by Sławek Sobótka & Kuba Pilimon).

WORK EXPERIENCE

CoreLogic sp. z o.o. · +2 years **Java Developer**

04/2024 - present

Software house · Cracow · agile methodologies (Scrum)

Project: Traficar - carsharing Java 21 · PostgreSQL · Kubernetes

- Designed and refactored the end-to-end user registration process, including integration with mObywatel (Polish government identity app) for identity verification.
- Optimized queries across multiple layers, cutting several endpoints from ~1s to ~100ms by eliminating N+1 queries and inefficient mappings.
- Extracted code from the monolith into internal libraries and modules — separating concerns and preparing components for reuse, with obfuscation for distribution.
- Restructured tangled, system-wide processes ("spaghetti code") into flows with clearly defined input, output and execution path.
- Debugged and delivered quick fixes across a distributed architecture of 15 microservices.

Project: FleetOnAir - fleet management Java 21 · React · PostgreSQL · Kubernetes

- Designed and implemented standalone components, modules, new features
- Contributed to the frontend as well, for full end-to-end understanding of each feature.
- Fixed bugs and maintained the existing codebase.

System for a wind-turbine servicing company Java 25 · React · Python · PostgreSQL

- Reduced service-route travel costs by **28%** versus manual planning (validated on historical data).
- Implemented automatic route optimization modeled as a Vehicle Routing Problem (VRP, NP-hard) using the PyVRP library.
- Built a resource/materials management module (Java/Spring, React, PostgreSQL).
- Integrated and processed 42,000+ wind-turbine records in Python from heterogeneous sources (German MaStR registry, OpenStreetMap, company data).
- Built an end-to-end release process from scratch: GitHub Actions, automatic version-bump PRs to production, webhooks, VPS deployment.
- Owned the full project cycle: requirements analysis → technology selection → implementation → evaluation.

PERSONAL PROJECTS

- **Zestio** — Multi-tenant mobile app in the "cookbook" space, built in spare time. Java backend with a Kotlin Multiplatform (KMP) frontend. Uses AI tools (prompting, code generation) for rapid prototyping, with a personal focus on high-level architecture and system design.
- **VALKYRIE** — Raspberry Pi / Python system that steers a gimbal-mounted camera from VR-headset head movements while streaming live video back to the headset.
- **Academic Projects** — e.g. P2P (distributed system running a shared workload — parallel brute-force cracking — with a swappable task abstraction and clean design patterns) and SQL from method name (Spring-Data-style query generation, ANTLR); both in Java, among others.

EDUCATION

MSc. Computer Science & Intelligent Systems

03/2026 - present

Specialization: Software Engineering

AGH University of Krakow

BSc. Computer Science & Intelligent Systems

10/2022 - 02/2026

AGH University of Krakow | GPA: 4.7 / 5.0

Mechatronics Technician

09/2018 – 04/2022

Electrical and Electronic School Complex | GPA: 5.38 / 6.0

ACHIEVEMENTS

- 3rd place at XLIII Scientific Circles Seminar WIM 2026 (Warsaw): embedded project - remote control & vision (inspired by the da Vinci robot).
- Finalist of the 45th National Olympiad of Electrical & Electronic Knowledge (mechatronics group, AGH).
- 1st place at the Olympiad of Technical Innovations and Inventions (OITiW) in Poland. SAFE DRIVE project ([Video](#))
